About the Foodpairing® Company

—We are a creative foodtech company at heart.

Foodpairing is a market research and information technology company identifying the successful flavour combinations of tomorrow. Through discovering the combination of scientific flavour insights and unique consumer data, we reduce the time to market and increase the success rate of product launches - this can improve enjoyment and the quality of our lives.

Ours is a unique approach to foodtech that utilizes chemistry, physics and data science as a launching pad for the future of food. It's no secret that our food system is out of balance. Global issues such as climate change, sustainability and obesity are directly related to food. By changing the way we eat, we can restore our planet.

Foodpairing strives to be a part of the solution and to become a global leader in the foodtech industry. Our long-term mission is to become the go-to platform for creating unique, fully customizable recipes based on science to promote healthy, sustainable lives.

—Are you ready to be at the forefront of Foodtech?

Responsibilities

- As a Flavor Intelligence Analyst, you will cooperate with our Data Analysis and Sales Teams.
- Think critically on data and data sources
- Generate actionable flavor insights optimizing aroma and marketing variables
- Create compelling presentations and present the outcome of projects before clients
- Participate in the ideation of new possible Foodpairing services

Your competencies

- Analyse & interpret data through logical thinking
- Think flavor from a cultural and culinary perspective
- Adapt & create insightful strategies for problem solving considering customers needs and requests
- Understand the implications of flavors and ingredients for product development and production
- Organize & execute tasks within a time frame
- Support & cooperate in an efficient team of Flavor Intelligence Analysts
- Create storytelling lines to support delivery of projects
- Communicate clearly & interact with clients and various teams within Foodpairing.

About the Candidate

- Study background in scientific field (bioengineering, chemistry, food technology) or equivalent through experience
- Knowledge and interest in food, aromas and food trends
- Flexible and adaptable towards working methodologies and tools
- Creative yet practical
- Cooperative and ready to learn
- Engaged and passionate
- Continuous improvement- oriented
- Proficient in English

In some cases, we offer trainings!
